Newer options, such as on-demand (OD) or long-acting injectable (LA) PrEP may improve uptake
OBJECTIVE: Preferences for starting various PrEP options were examined among a US nationwide online convenience sample of MSM
Recruitment
- September 2021 to February 2022
- Online recruitment through banner ads on social media, sex-seeking and gay interest websites and apps
Eligibility
- 15 years of age or older
- Cisgender male
- Had oral or anal sex with a man at least once in the past
- US residence
Additional analytic criteria
- Oral or anal sex with another man in the past 12 months
- No self-report of prior HIV diagnosis
Measures
- Scenario based preferences – after brief explanation of PrEP option “If [PrEP option] were available from your local doctor and you could access it for free, would you go to your doctor in the next month to start [PrEP option]?”
- Rank preferences if would start multiple
- If current DO user, framed as “would you switch”

Statistical Analysis
Willingness to start LA-PrEP explored with multivariable logistic regression with predicted margins approach, for age, race/ethnicity, insurance and heard of LA-PrEP. Adjusted prevalence ratios (aPR) and 95% confidence intervals (CI) reported.
