

Cabenuva: Change in Dosing Frequency

Cabenuva, a 2-drug co-packaged product of cabotegravir (CAB LA), an HIV-1 INSTI, and rilpivirine (RPV LA), an HIV-1 NNRTI, is indicated as a complete regimen for the treatment of HIV-1 infection in adults and adolescents 12 years of age and older and weighing at least 35 kg to replace the current antiretroviral regimen in those who are virologically suppressed (HIV-1 RNA < 50 copies/mL) on a stable antiretroviral regimen with no history of treatment failure and with no known or suspected resistance to either cabotegravir or rilpivirine.¹⁻²

Dosing Recommendations When Switching from Monthly to Every-2-Month Dosing¹⁻²

Dosing Recommendations When Switching from Every-2-Month to Monthly Dosing¹⁻²

Both (CAB LA and RPV LA) injections should be administered as **IM injections** at separate gluteal injection sites (on opposite sides or at least 2 cm apart) during the same visit.¹⁻²

Important safety information can be found in the Prescribing Information and can also be accessed at [Our HIV Medicines](#).
